

**YOUR FUTURE IS WAITING.
RIGHT HERE. RIGHT NOW.**

MS Technology Management

You've put in several years in the trenches and made significant gains in your professional career. Now you're ready for something more—and are looking to take the next big step. The MS in Technology Management program at George Mason University School of Management can help you create the future you desire.

Our program provides technology professionals with the management skills you need while addressing the specific challenges of technology management. It's a program designed with the flexibility you need as a business executive—and the challenges you want from an advanced degree program.

- January start date
- Program completed in 16 months
- Classes held on Saturdays
- One-week international residency
- CIO Certification

MS Management of Secure Information Systems

Designed for working information technology professionals, the MS in Management of Secure Information Systems—a cross-disciplinary program drawing on the expertise of faculty members within the School of Management, School of Public Policy, and Volgenau School of Engineering—can help you manage cyber security challenges in a global business environment.

Our program provides professionals with the management skills you need while addressing the specific technology and policy challenges of modern computerized information systems. It's a multi-disciplinary program designed with the flexibility you need as a business executive—and the challenges you want from an advanced degree program.

- January start date
- Program completed in 14 months
- Classes held on Saturdays
- One-week international residency
